(Continued from page 47)

(Continued from page 47)
black microwave cookware line.
"I think our black material is a
nice departure," said Doug
White, vice president of marketing for Nordic, explaining that
the black products are also made
of a more heart-resistant plastic.
Since black it respect to release. Since black is geared to select markets, Nordic has not ex-perience any competition with its existing products, a company spokesperson said.

Clarence Arpin, president of Endura, explained that the in-troduction of its "high intensity" black in January was in response to feedback from several European countries to which Endura exports. "Black is still a high style color," he said, noting that the company never expected black to replace white. When Endura introduced its new color, Arpin expected black to rep-

Arpin expected black to represent only five percent of its business; instead, it represents 10 percent.
"Color is only one aspect of fashion," explained Terry Van Valkenburg, merchandising manager for Anchor Hocking Plastics. "Consumers tend to like products that are more round than square." In response, Anchor Hocking rounded the edges on most of its products to add style and products to add style and fashion, she said.

"Both fashion and shape are important," said John Daven-port, director of marketing for EZ Por. "What the consumer was faced with were utilitarian shapes. We felt that there could be fashion for microwave ac-cessories in terms of design." EZ Por, which recently in-troduced Servingware to its Micro Ease line, designed its new products with sculptured handles and oval and round shapes, as

well as fashion colors.

Gael Pervilhac, marketing manager for Durand International's dinnerware and cookware department, predicted its Arcoflam's design, versatility and durability would help it create a niche in the marketplace. Arcoflam, which is made of a special vitro-ceramic thermal-shock-resistant material, is designed for use from freezer to rangetop to tabletop. Per-vilhac said Arcoflam is also "very elegant serveware" that a consumer can bring to the table

because of its white body with

swirl design.

Most manufacturers agreed that new colors nd designs are becoming increasingly important in microwave accessories, but they also conceded that there are several obstacles created when already multitudinous assort-ments are expanded.

"Retailers should be careful about the number of vendors they can support," Chapman said. "At this time, retailers are trying desperately to consolidate the number of SKUs," he added.

With retailers limiting the number of SKUs they carry, Regal Ware has only added colors to best-selling items, such as its promotionally priced Cook & Save lines, according to Jerry McNabb, vice president of housewares sales.

"Dealers have to be selec-

tive," said Harry Roehm, president of Tara Products Corp. Retailers can limit their SKUs by knowing their customers and choosing only those products they're sure their customers will buy, he said.

To ensure sell-through at retail. Rubbermaid does extensive tail, Rubbermaid does extensive research before introducing a new color to identify the "right" colors for its products, Chapman explained. "I think retailers are looking for manufacturers to make the category easier to buy and easier to sell," he said. To encourage retailers to test

its colors, Anchor Hocking is allowing retailers to order colors whenever they want in addition to their regular orders. "We are really looking at new colors, at this point, as a promotional activity," Van Valkenburg said. If the color is well received, retailers may permanently take on the color or reserve it for oc-casional promotions. "I think the consumers dictate in the long run which colors are selected," she added.

Even though additional colors have created some excitement in the category, some consumers prefer no color at all. "Some are attracted by the addition of col-ors, while others like (the ac-cessories) clear," said Marty Shaevel, vice president of sales and marketing for Sterilite,

wave accessories.

Tara recently created a line of Micro Clear, which is transparent plastic similiar to glass, according to Roehm, who added that the product is convenient because the consumer can vis-ually monitor the cooking pro-

In addition to color and shape, several companies have experimented with patterns on microwave accessories. Ten years ago, Tara introduced three different patterns in its micro-wave cookware line. However, Roehm said the consumers preferred the cookware without

Two-part drink dispenser in 3 qt. (\$27 retail) or 2 qt. (\$21 retail) sizes. Top holds ice or dry foods. Inner section holds hot or cold. Kove: Klad Prod., 109 Lamar St., West Babylon, N.Y. 11704.

propelled from above, giving it more power than an "undershot" wheel merely pushed by the natural current of the stream. He showed them how the wheel's revolutions were transmitted to the huge millstones, and how grain was fed between them through a hopper to be converted into flour by the grinding of the top stone, faced with cutting edges, against the nether stone. "The meal and flour we turned out made the richest bread you ever ate. Folks used to bring their grain to us from miles around, and we'd take a tenth as miller's toll. Oh, maybe it wasn't as easy as it soundsthere's an art to bein' a good miller, just like there is to anything worthwhile.

David sighed and looked around. "And now it's finished. I guess it would take a fortune to ever get it running again."

"Why, no," answered Uncle Calvin.
"Oh, it might if you used a lot of fancy modern equipment. But doing it the old way, using nothin' but seasoned wood, all it would take is a lot of hard work and somebody who knows what he's doing. Of course, there's lots of the right kind of wood, up there in a shed behind the house. Been laying there for years. . ." Then he muttered, "Hand me that big hammer, young man, please. Long as we're here, might as well knock this collar back in place."

They were still puttering around downstairs when Sara went upstairs to cook their supper on the wood range. She was thoughtful. All afternoon, she had been expecting Uncle Calvin's mind to slip away, as usual. But it had not. As long as it was focused on the mill, it had been as clear and sharp as her's or David's.

And it still was when, after some urging, she managed to get both of them, dirty and sweaty and happy, upstairs. After they had washed and sat down at the table, Calvin, looking around, said, "I'm glad you folks are happy here. It's good to have young folks that love one another in this place again. Miss Mary Lou would be pleased, too. Missy, I got an idea. There's lots of extra furniture up yonder at the big house that would make this place more homelike. Why don't you just pick out what you need and we'll move it down here in the truck. Especially that sewing machine." He laughed. "I won't be using that."

Sara protested, but he insisted. "Miss Mary Lou certainly would not object." And so, after supper, it was done; and she was pleased with the effect, and especially glad to have a decent mattress for the double bed.

The next day, Sunday, Calvin was at the mill before she could start for his house to cook his breakfast. "You know," he told David, "I thought all night long about how to fix that raceway out there. I believe we could rig that tackle to a tree and pull them fallen sections upright and brace the legs with posts."

David's face lit. "Let's take a look after breakfast."

Sara left them working outside while she put the finishing touches on the arrangement of the furniture. She almost had to force them to eat, and after supper they worked together making sketches, talking in mechanical terms she did not understand, as if they shared a secret language. After Calvin had gone home, David said with admiration: "You know, that old man is *sharp*. With no formal training he's still a good engineer." From David, there was no higher praise.

That weekend set the pattern for days and weeks to come. Calvin was at the mill early every morning, puttering around while David was at his job. During the remaining daylight hours and every weekend, they worked together constantly. Neither ever said it in so many words, it was almost as if they were afraid the idea were too absurd to voice, but Sara knew they had set their minds on putting Dancer's Mill back in operation, as a hobby and just to see if they could do it.

Nor did she complain about the time they spent at this pursuit. Instead, she took pleasure in working alongside her husband when she could and found herself sharing his fascination with the challenge the mill presented. And, she told herself, it did not matter whether they succeeded or not. Because being involved was having a profound effect on both men.

David was wholly absorbed in the project, and she had never seen him happier or more contented; never had their life together been better than it was now, and that was enough for her.

But the greatest change was in Calvin Dancer. She understood now that his malnutrition had been not so much of the body as of the mind and spirit. Lonely, bored, his thoughts had had nowhere to turn but inward, to the past. Now, with a new goal, vigorous young friends to share it, and a chance to use his many talents, he shed his vagueness like an outgrown skin. Grappling with concrete problems made his mind clear and sharp, just as decent food and exercise made his body stronger, more resilient. Sara found herself delighting in his company. He taught her much about the countryside, and, of especial interest to a dietitian, showed her wild plants and herbs the country people had always used for food and how to prepare them. Together they caught fish from the millpond, planted a vegetable garden, and she was too busy to be bored.

Archie Blades, coming once a week now, was astonished and delighted. "It's a miracle. This is how I remember him from when I was little. Back then, I thought he was the finest man I ever knew, and I loved him."

Sara smiled. "I'll tell you a secret. So do we."

"Anyhow, far as I'm concerned, the place is yours, long as you want to stay."

But, one day, the question of how long they wanted to stay had to be faced. For, more rapidly than they had expected, their savings had grown. Counting money on the table, David said, "Well, that's enough to fix the station wagon. We're back in business."

Something like a cold hand squeezed Sara's heart at the thought of leaving. "Are we?"

"Yeah. Only. . . ." David fingered the pile of bills, then looked at her oddly. "Look," he burst out, "would you be disappointed if we didn't leave right away? We'll be all right here for a while longer, and in just a couple of weeks more, we might even have the mill finished. I couldn't go before then and disappoint Uncle Calvin. He's got his heart so set on it."

Sara went to him, put her arms around him. "I don't care if we never go," she whispered.

He kissed her. "It's funny," he murmured, "but sometimes I don't either."

The next day was Saturday, and the mill rang with the sound of hammers, as the two men worked. Watching them, Sara heard a car stop outside.

Expecting Archie, she was surprised when a woman got out, striding briskly to the mill.

She was tall, slim, gray hair neatly set, clothes stylish, yet severe; and though thinner, harsher, her face unmistakably resembled Calvin Dancer's. Gray eyes raking over Sara in her work clothes were hostile. "I suppose you're Mrs. Marsh. I am Jane Blades."

Sara tensed. Calvin's sister, Archie's mother, and, in all the time they'd been here, it was her first visit to the mill. She knew that Archie had tried to keep their presence here a secret from the woman, as if, while loving her, he feared her; now Sara understood why. She unstood, too, that in a small town it was impossible to keep such a secret forever.

"Please come in," Sara said, but Jane Blades had already shoved past her.

"Calvin!" Her voice rang through the mill.

Calvin Dancer, naked to the waist, grease-smeared, straightened up from the mechanism he was working on; and he and David turned. Seeing his sister, he smiled. "Hello, Sis. Glad to see you. Look. I'll bet *this* will surprise you."

Jane Blades looked around the mill, eyes pausing for a moment on David, then coming back to Calvin. "What do you think you're doing?"

"Why—why trying to get the mill running again."

"And whose idea was this?"

"I guess it's mine, Mrs. Blades." David stepped forward. "I'm David Marsh, this is my wife. And it's just a hobby. . . ."

"I know who you are," she snapped. "Calvin, what kind of foolishness is this? You're too old to be doing hard work like this. And even if you bring it off, what earthly use is it?" Her face softened a little, and she took his hand. "Now,

BAD RECEPTION?
